Real Time Linux Workshop in Nairobi, Kenya
October 25 to 27, 2010

In 2010, the international Real Time Linux Workshop (RTLWS) will come for the first time to Africa after being held annually in various places in America, Asia and Europe since 1999.

The workshop focuses on all aspects of developing, configuring, testing and using a real time version of the Linux kernel. Such systems are often required in the automation industry, audio and video recording and processing, online banking, data acquisition and many other industries and sciences that rely on real time computing.

Papers on current progress in Real Time Linux to be presented at the workshop must be submitted online and undergo review by the program committee. Registration is required for speakers and participants of the workshop.

The 12th RTLWS in Nairobi is organized through the collaboration of the Faculty of Information Technology at Strathmore University, the Real Time Linux Foundation and the Open Source Automation Development Lab.

Details of paper submission and workshop registration are available at www.strathmore.edu/rtlws12 and www.osadl.org.
